## VII. CONCLUSION

After reviewing the available scientific and commercial data, current status of Pacific green turtles, the environmental baseline for the action area, the effects of the proposed action and the cumulative effects, it is the NMFS' biological opinion that the continued authorization of pelagic fisheries in the Western Pacific Region under the Pelagics FMP is likely to jeopardize the continued existence of green turtles.

After reviewing the available scientific and commercial data, current status of Pacific leatherback turtles, the environmental baseline for the action area, the effects of the proposed action and the cumulative effects, it is the NMFS' biological opinion that the continued authorization of pelagic fisheries in the Western Pacific Region under the Pelagics FMP is likely to jeopardize the continued existence of leatherback turtles.

After reviewing the available scientific and commercial data, current status of Pacific loggerhead turtles, the environmental baseline for the action area, the effects of the proposed action and the cumulative effects, it is the NMFS' biological opinion that the continued authorization of pelagic fisheries in the Western Pacific Region under the Pelagics FMP is likely to jeopardize the continued existence of loggerhead turtles.

After reviewing the available scientific and commercial data, current status of Pacific olive ridley turtles, the environmental baseline for the action area, the effects of the proposed action and the cumulative effects, it is the NMFS' biological opinion that the continued authorization of pelagic fisheries in the Western Pacific Region under the Pelagics FMP is not likely to jeopardize the continued existence of olive ridley turtles.
